AI CONTENT AT SCALE · SCHWERIN, GERMANY

# 600+ videos a month. One face. Built on Higgsfield.

We are building an automated content machine: an AI agent turns trending formats into videos with our founder’s face, using Genjutsu, Seedance 2.5 and Katana, and publishes them across 30 social accounts. First for our own brand, then as a product for our clients in the German-speaking market.

AGENCY

### Contenthütte

Marketing and AI agency for construction and trades businesses. Own office and team in Schwerin.

AI COMPANY

### ULTRA

AI automation for mid-market companies. Builds the agent workflows behind the content machine.

FOUNDER

### Leif Dunkelmann

Founder of both companies and the face of the brand we are scaling.

## We have two requests.

Each one can be decided on its own.

1

### An unlimited plan for our own brand – usable through the API.

Unlimited generations for Genjutsu, Seedance 2.5 and Katana, driven by our AI agent through your MCP/API with at least 3 jobs in parallel. Around 600 videos a month, with room to grow to 900.

2

### A platform partnership – Higgsfield inside our content platform.

Permission and partner terms to generate videos for our clients through our own platform, sold as monthly packages, with volume pricing that grows as we add clients.

THE WORKFLOW

# From a trending reel to 30 accounts, without manual editing.

Everything runs through one control panel, the Content Cockpit. An AI agent does the work; a person only picks the ideas and approves the result (or switches on auto-post).

**1 · INPUT**
**Reel link + face photos**
A trending video and reference photos of the person

→

**2 · AGENT**
**AI writes the brief**
Picks the model, writes the prompt, checks the cost

→

**3 · HIGGSFIELD API**
**Genjutsu · Seedance 2.5 · Katana**
3 jobs in parallel, 720p, up to 15 s

→

**4 · REVIEW**
**Approve or auto-post**
One click, or fully automatic

→

**5 · PUBLISH**
**Metricool**
Scheduled to Instagram, TikTok and YouTube

↻ Analytics from every account flow back into the next day's ideas.

WHERE IT POSTS

## 10 account sets, 30 accounts

One main account plus 9 sub-brands. Each set posts on Instagram, TikTok and YouTube Shorts. All sub-accounts point to the main account, the live streams and a paid community.

MODEL MIX

| MODEL | USE | SHARE |
|---|---|---|
| **Genjutsu** | Trending formats recast with our face | ~70% |
| **Seedance 2.5** | Original sketches with German dialogue | ~30% |
| **Katana** | Remixes of the best performers | as needed |

ROLLOUT

| STAGE | WHEN | WHAT HAPPENS | VIDEOS / MONTH |
|---|---|---|---|
| **1 · Test** | from 19 Oct 2026 | 2–3 account sets, find the formats that win | ~300 |
| **2 · Scale** | from Nov 2026 | All 10 sets, 20–30 videos a day, live streams start | 600–900 |
| **3 · Clients** | from Dec 2026 | The same workflow runs for client brands | + per client |

Targets, not commitments. In our tests this week, Seedance 2.5 was the only model with clean German speech.

1

REQUEST 1

## Unlimited plan for our own brand

### What we need

- Unlimited generations for **Genjutsu** and **Seedance 2.5**, plus **Katana**
- Usable through your **MCP / API** – our AI agent runs the jobs, not a person in the browser
- **At least 3 jobs in parallel** (20–30 videos a day)
- 720p or higher, clips up to 15 seconds
- Start month to month; longer term once the test stage works

### Why it matters

The current unlimited plans work only in the browser and one job at a time. That caps us at 15–20 videos a day and rules out automation. With API access and parallel jobs, one plan carries 600 videos a month and more.

Questions for you: What is the monthly price at ~600 and at ~900 videos? Is there a fair-use limit? Which resolutions and durations are included?

2

REQUEST 2

## Platform partnership

### What we are building

The **Content Cockpit**: one platform with three engines – a **Higgsfield engine** (trend in, video with the client's face out), an avatar engine and a clipping engine for live streams. Sold as "your personal brand on autopilot" to creators and businesses in Germany, Austria and Switzerland, first done-for-you by our team, later self-service.

### What we need

- The right to generate videos **for our clients** through your API
- The right to **resell** generations inside our monthly packages
- **Volume pricing** that steps down as client usage grows
- Parallel jobs that scale with the number of clients
- Early API access to new models

### What Higgsfield gets

**Growing API volume**
One partner that grows from hundreds to thousands of videos a month.

**A channel into DACH**
New creators and businesses reach Higgsfield through our platform.

**Case study + feedback**
German-language proof of scale, credited to Higgsfield, and data from heavy agent use.

NEXT STEP

**A written offer for request 1, and partner terms for request 2.**

We are ready to start the test stage on 19 October.
